

## FINISHING SCREEN

### The Ultimate Mobile Inclined Screener

The RubbleCrusher FS410 Finishing Screen is a compact, versatile solution for fine screening applications. Ideal for sand, gravel, coal and aggregate applications, the FS410 Screen offers an entry-level, cost-effective solution for high-tonnage production with ease of movement and flexibility on sites with a small footprint.

Featuring a 10' x 4' double deck screen box and three hydraulically-folding conveyors, the FS410 Screen allows you to size and sort up to three different products. Designed for optimum efficiency, the 9' feed hopper can be easily loaded with an excavator or directly from the belt of a crusher.

Adding the FS410 Finishing Screen to your inventory enables you to produce various material sizes immediately on the very spot where the material has been crushed, allowing for the material to be recycled and reused on the jobsite. With a compact design that containerizes without any breakdown, you can be immediately running on site in as little as 15 minutes.

Compact, mobile footprint

Reduce hauling time and costs

Limit waste going to landfills

Size and sort multiple product sizes

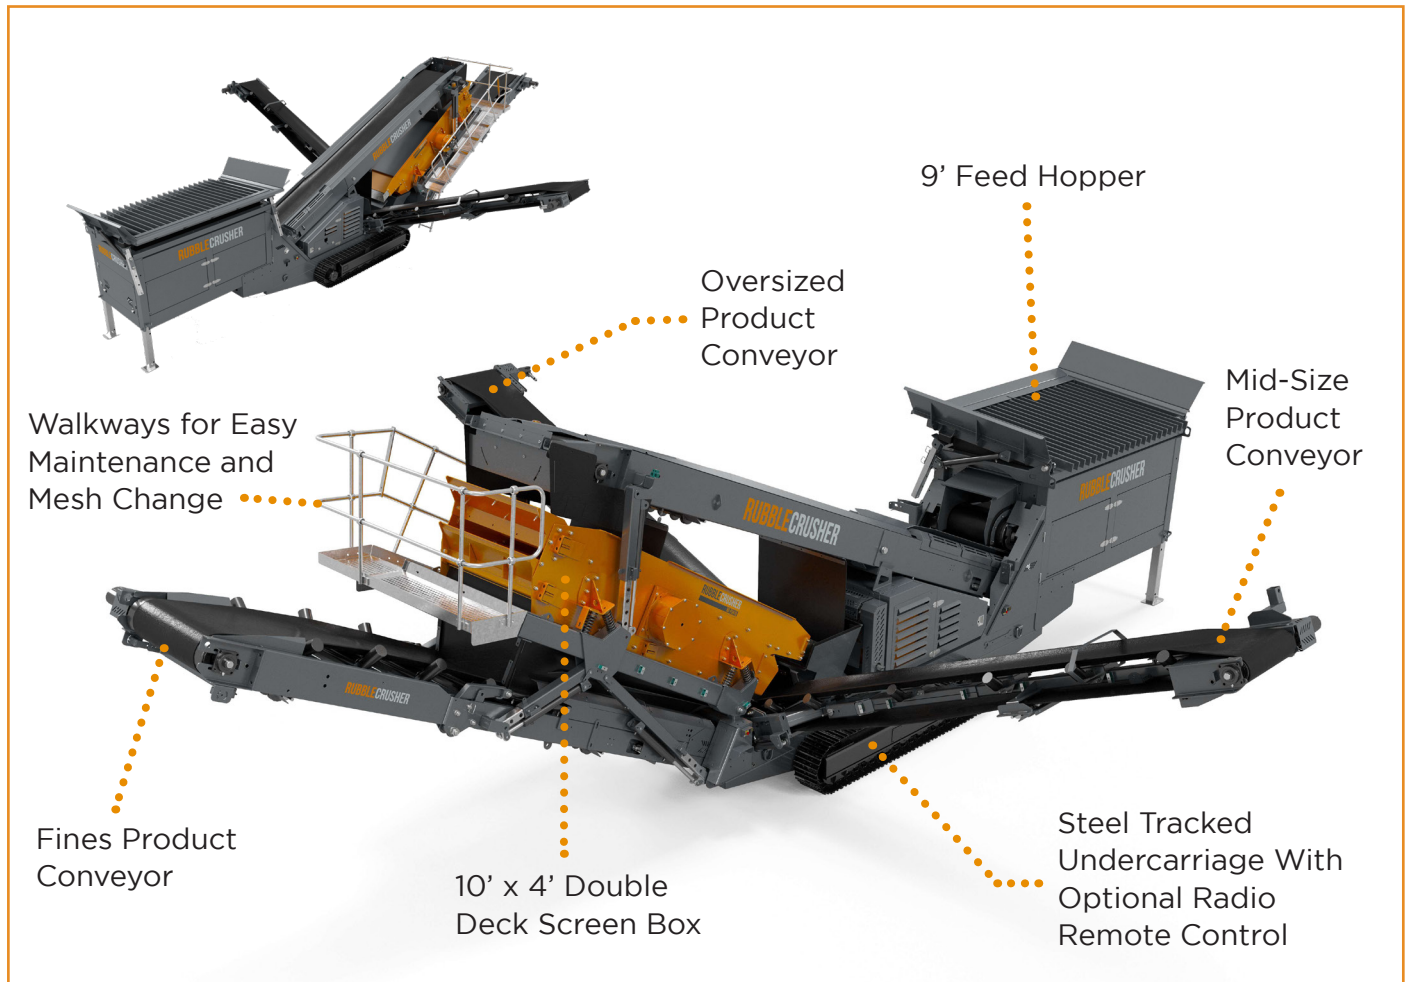

Transform waste into a profitable product

Increase the use of recycled material

## FS410 - TRACKED FINISHING SCREEN

SCREEN - FS410	SCREEN SIZE	10' x 4' (3m x 1.2m)
