

MOBILE SCREEN

The Ultimate Self-Contained Mobile Screener

The RubbleCrusher RCS48T Screen is a compact screening solution for recycling and separating construction and demolition waste materials on site. These low-tonnage screens are perfect for many small- to moderate-sized screening projects and provide a great solution for builders, landscapers, gardeners and contractors, as well as for recycling, demolition and medium-sized aggregate applications.

Featuring three foldable conveyors, the RCS48T Screen allows you to size and sort up to three different products, including 1", 1/2-1", and 1/2" minus. The screen's larger built-in feed hopper allows you to easily feed your product with a mini excavator or skid-steer.

Adding one of the RCS48T Screens to your inventory enables you to produce various material sizes immediately on the very spot where the material has been crushed, allowing for the material to be recycled and reused on the jobsite.

Small, mobile footprint

Size and sort multiple product sizes

Reduce hauling time and costs

Transform waste into a profitable product

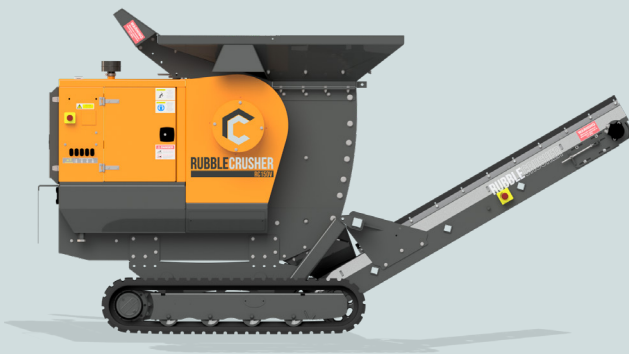

Limit waste going to landfills

Increase the use of recycled material

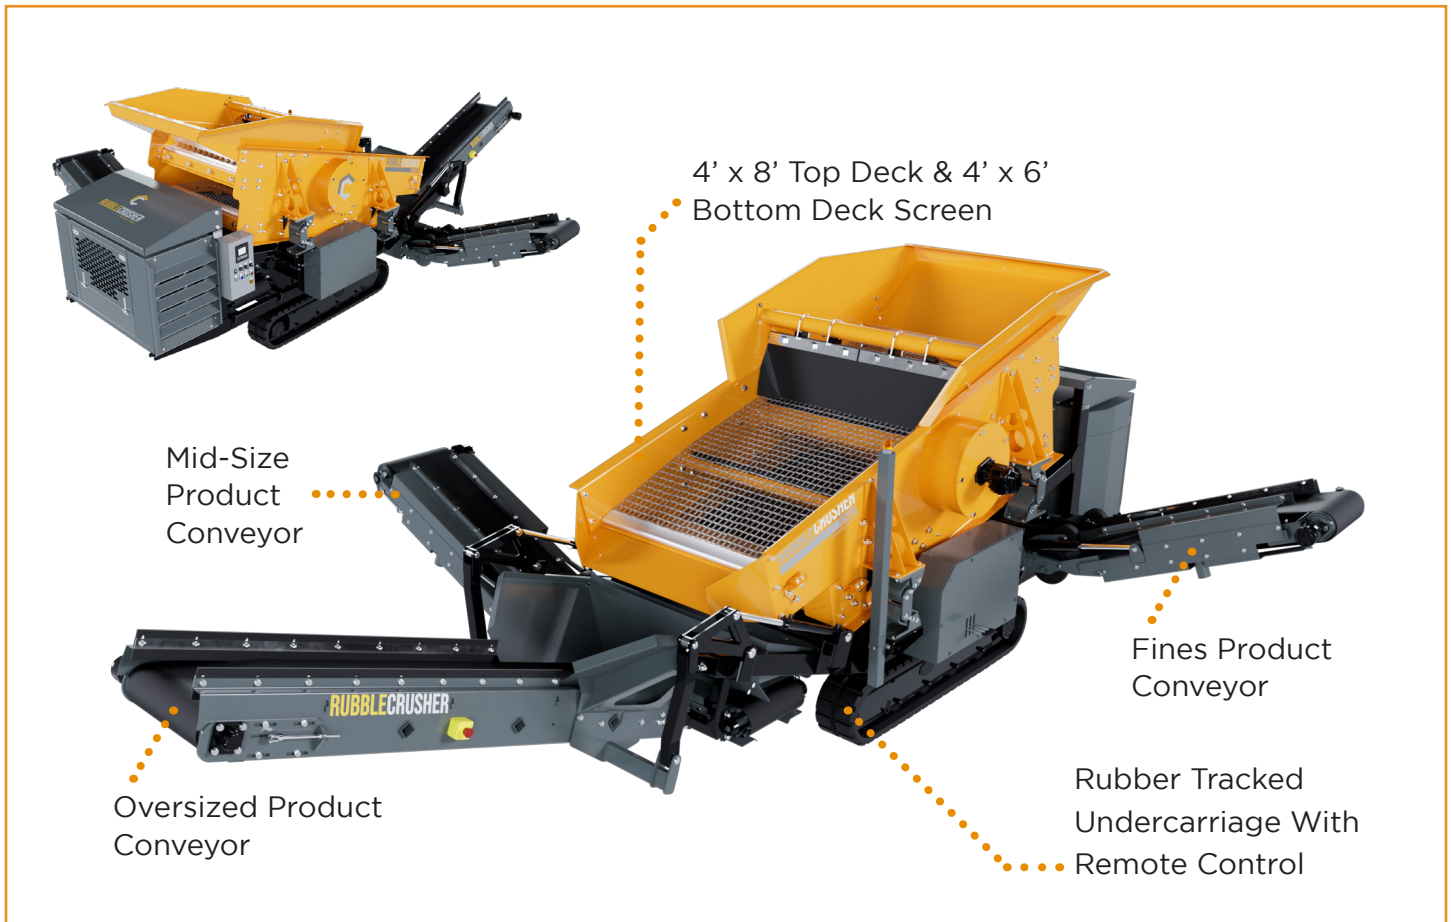

Pair With A RubbleCrusher RC150T To Crush And Screen On Site

RubbleCrusher's Jaw Crusher and Screen are the perfect addition to your site's recycling plan.

The RC150T Jaw Crusher manages your concrete, stone and brick waste by producing multiple, usable sizes of recycled material. When paired with the RCS48T Screen, operators can size and sort their material for immediate reuse or potential sale.
